

## THANK YOU

Your attention to these matters helps us ensure safe corneas for transplant. Together we can honor the wishes of the deceased and their families.

## EYE CAPS/PREP

The use of eye caps renders the corneas UNSUITABLE for transplant. Please wait until after recovery to use them.

Body prep and embalming scheduled AFTER cornea recovery ensures that we best support the donor and family's choice.

## MEMORIAL PROGRAM

Families often find that donation was a ray of HOPE in a dark moment. A mention of this gift at the memorial service can expand that hope.

## FACILITY INFO

Our simple form allows you to direct our Coordinators for quick, efficient cases. Please complete yours today.

## DISINFECTANT

The use of disinfectant renders the corneas unsuitable for transplant. Consider spraying the eyes POST-recovery.

## COOLING

Please keep the body COOL to keep tissues viable for donation.
